Created by a consulting firm

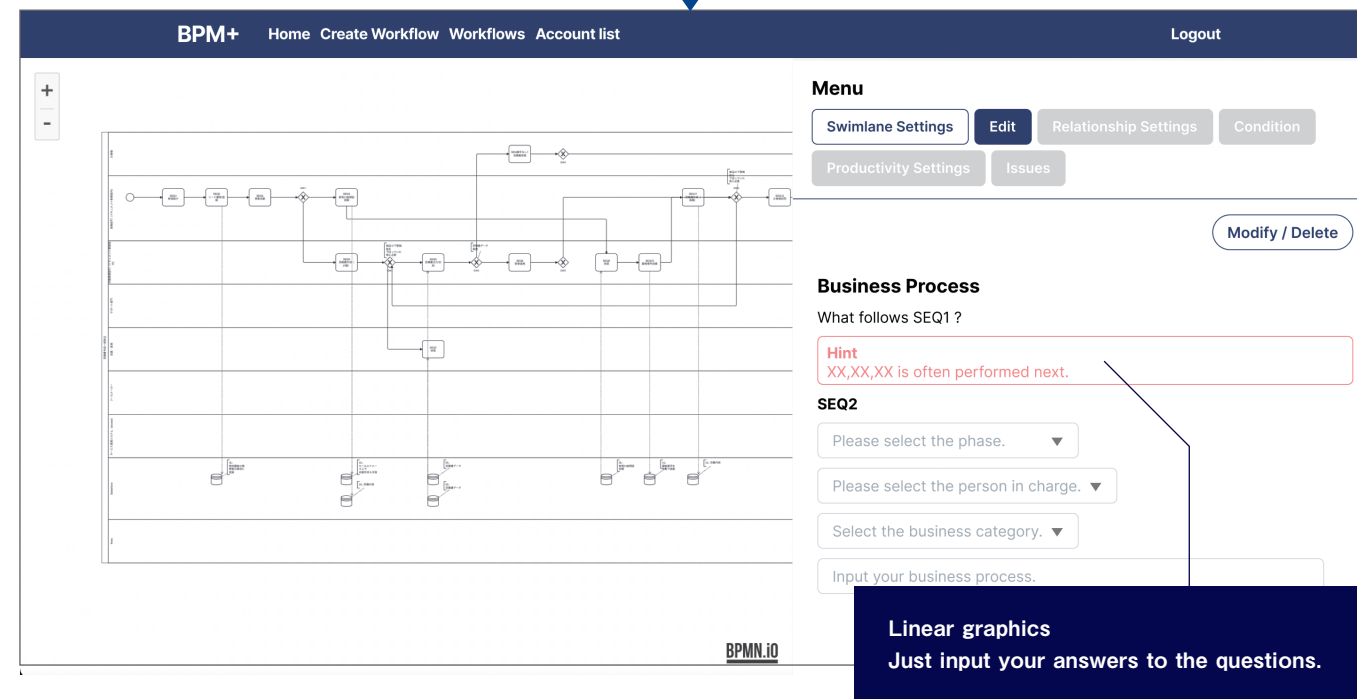

BPM+ Development roots

Supporting BPR self-driven

The starting point for business improvement is to understand the current status.
The operational staff must be aware of the need for improvement.

We believe that having the operational staff create the BPMN*, which serves as the starting point for improvement, and fostering a sense of autonomy and ownership, is the first step towards enabling the self-driven of BPR.
BPM+ is a solution for BPR promotion based on our experience.

*BPMN: Business Process Model and Notation, a flowchart method that models the steps of a planned business process from start to finish.

Framework for BPM!

Recommended for the companies.

Having difficulties in creating BPMN.

Starting BPR from now on.

For example,

BPMN creation takes a long time.

Variations in rules and procedures make for a dozen different BPMN.

Only certain employees can create BPMN.

Want to know current status for now.

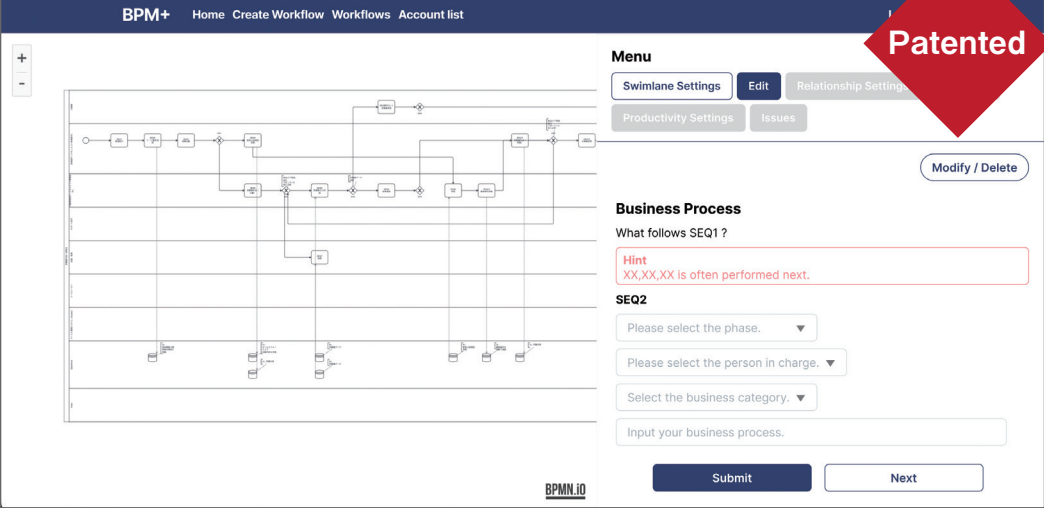

Want to promote BPR proactively internally.

Information needed for training and handover is in the minds of individual employees.

BPM+ is perfect for such companies!

Unique Features

01 So Easy
No knowledge No experience

*1
Patented

- 1.Linear diagramming by simply typing in questions.
- 2.Quick and easy progress with the recommendation word function.
- 3.Uniform notation rules ensure that there is little variation, no matter who creates it.
- 4.Creation by people engaged in the actual business facilitates subsequent improvements.

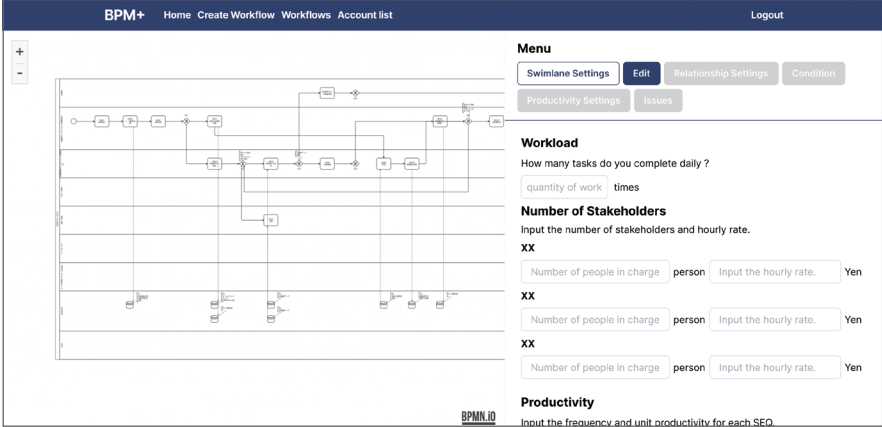

Role of people and systems

BPM+ Part

Let's start visualize the current status,
with the operational staff taking the lead?

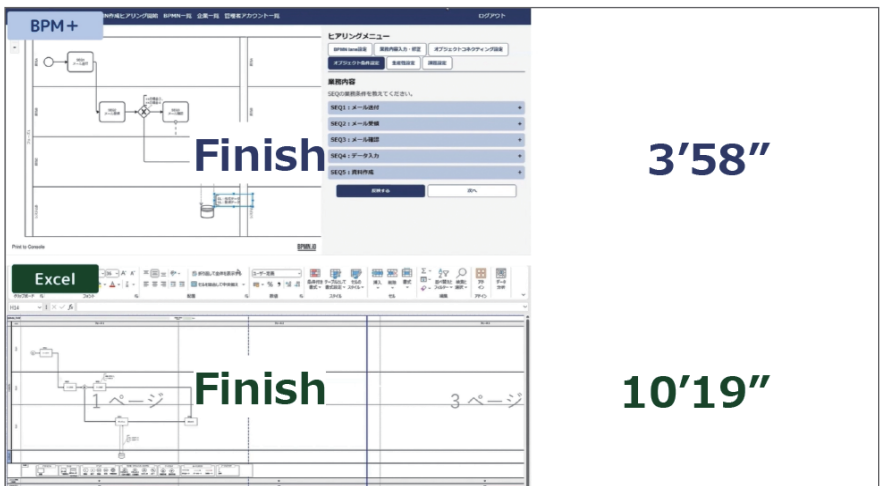

*1. PAT. JP7545132 PCT/JP2024/18362
*2. SEQ stands for Sequence. SEQ list is a matrix table of multiple factors such as roles, man-hours, and operating costs (Our original).
*3. Issue analysis system capable of supporting planning of countermeasures by simply importing BPMN.
*4. Comparison of creation speed between BPM+ and Excel (actually created by our consultants).

02 For Analyze
Flow chart conversion data

1. Automatically generate a list of SEQs^{*2} that would be complicated to create simply by answering questions.
2. Converting role assignments and man-hours per task into data and output in CSV format.
3. More specific countermeasure proposals can be selected by utilizing the data for assumption of effectiveness and reimbursement.
4. Smooth data transfer to BPL+^{*3}

03 So Speedy
Creation time reduced by 80%^{*4}

1. Reduction of creation time makes BPR promotion smoother.
2. High availability due to easy operation by anyone
